# ABOUT

I studied graphic design in school, but then spent 100 days on a ship traveling around the world and found myself in international development. 3 NGOs and 3 years in Taiwan later, here I am. Back in design and loving it.

# CASE STUDY: TRUESPIRIT

Description	Color	Item Price	Suggested	Purchase
Polo shirt quickview	Blue	\$15	1	<input type="button" value="1"/> <input type="button" value="-"/> <input type="button" value="S"/> <input type="button" value="Add to cart"/>
Polo shirt quickview	Blue	\$15	1	<input type="button" value="1"/> <input type="button" value="-"/> <input type="button" value="S"/> <input type="button" value="Add to cart"/>
Polo shirt quickview	Blue	\$15	1	<input type="button" value="1"/> <input type="button" value="-"/> <input type="button" value="S"/> <input type="button" value="Add to cart"/>

## DESCRIPTION

TrueSpirit is a new internet retailer for schools and parents who want a modern school uniform for primary and secondary school children.

## CHALLENGE

Highlighting suggested items schools recommend parents by for their children. And, of course, making the checkout process simple and quick for busy parents.

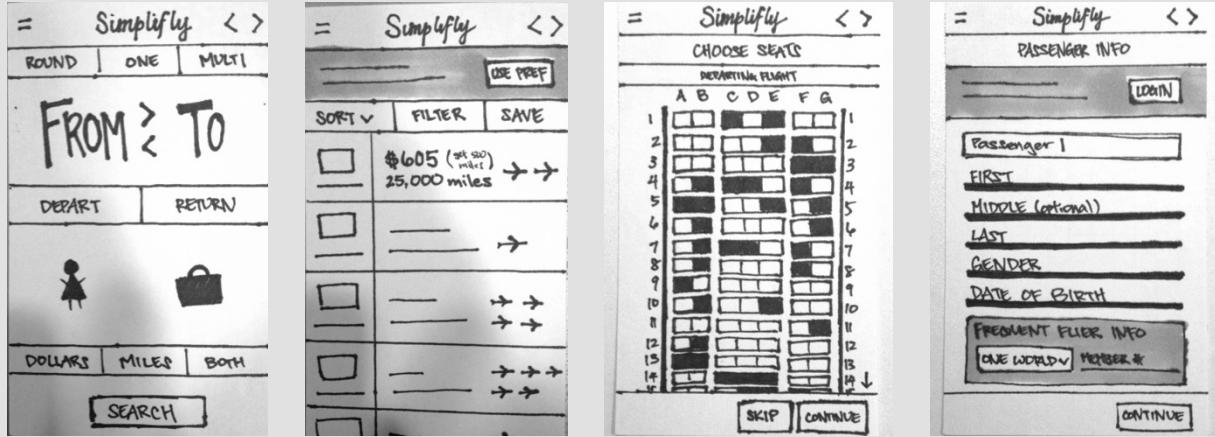

## SOLUTION

I created a list similar to a wedding registry that allows parents see all the items they need on one page and placing the orders on the same page.

# CASE STUDY: SIMPLIFLY

## DESCRIPTION

Simplifly is a new mobile app that allows you to search for flights, factoring in hidden costs like extra leg room and additional baggage.

## CHALLENGE

Adding all the filters without making it too overwhelming or creating too many steps. Basically making it Kayak, but better. Much better.

## SOLUTION

I created a graphical interface for all the filters; a signed-in user would have their preferences pre-selected.

# CASE STUDY: FOURSQUARE

## DESCRIPTION

Foursquare would like to increase the level of engagement with their users and merchants by adding a mobile payment component to check-ins.

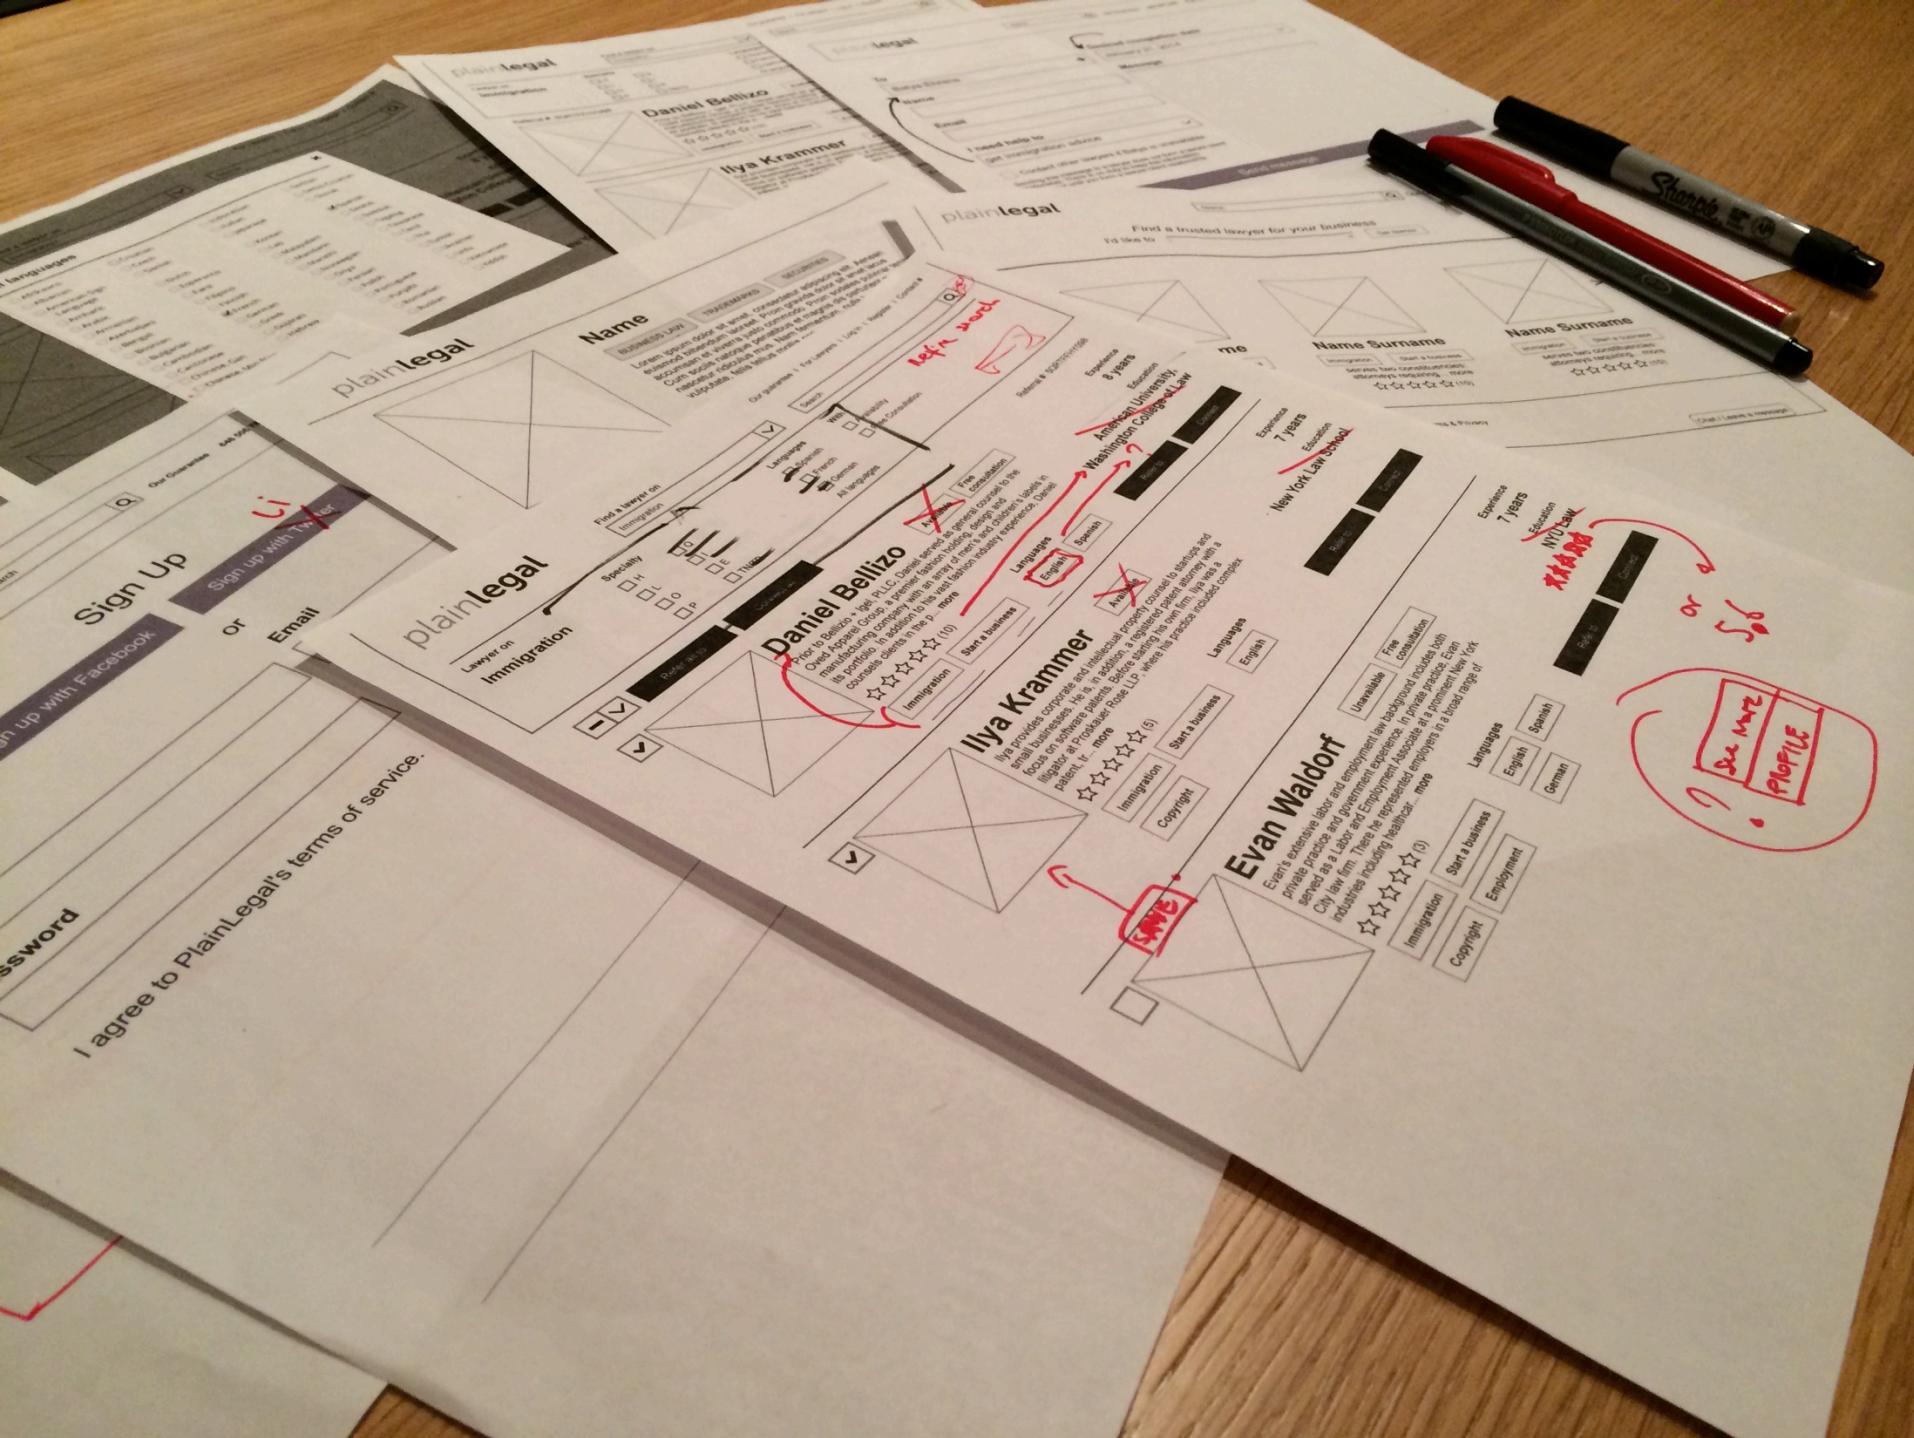

## CHALLENGE

Getting their users to notice and start using the new mobile app payment feature when they check-in at their locations.

## SOLUTION

Combining a service like Seamless and GrubHub to Foursquare, making it easy for people to pay for their food when they check-in.

# CASE STUDY: PLAINLEGAL

The screenshot shows the homepage of plainlegal. At the top, there's a search bar with placeholder text "Find a trusted lawyer for your business". Below it, a dropdown menu says "I'd like to" followed by "Start a new business". There are two profiles listed: "Evan W." and "Daniel B.". Each profile includes a photo, name, location (New York), and a brief description of their legal specialties.

This screenshot shows a search results page for "Intellectual Property". The results are filtered by "Copyright". Three lawyers are listed: Ilya B., Arina S., and Brian L., all from New York. Each listing includes a photo, name, location, a bar chart of their case types, and a "Profile" and "Contact" button.

A modal window titled "Contact Lawyers" is shown. It lists two lawyers: "Ilya Brown" and "Brian Klein". Below them is a "Your email" field, a "Desired completion date (optional)" field set to "January 31, 2014", and a "Message" text area. The message starts with "Hello!" and asks for help with an immigration case. There are also checkboxes for "Contact other lawyers if these lawyers are unavailable" and a note about lawyer-client confidentiality.

## DESCRIPTION

PlainLegal is a startup connecting entrepreneurs and small business owners to trustworthy, affordable lawyers.

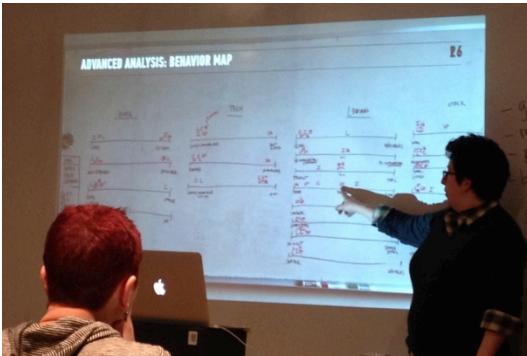

## CHALLENGE

They are having problems with drop off & conversions. The site currently requires users to visit multiple pages before they are able to contact a lawyer.

## SOLUTION

We standardized the pages and switched the order of signing up for an account send sending a message.

# FAQs

## Why User Experience?

It's a great combination of two things I love— design and code. Also, I care a lot about efficiency which is huge for ux. I like making the process as easy and as simple as possible for the user to get to their end goal.

# FAQs

## Why General Assembly?

I took their Back End Web Development class before this to learn Ruby on Rails and just fell in love with the place. I love the atmosphere and the community. I knew I wanted to keep up the momentum so when I heard about UXDI, I knew it was a sign.

# FAQs

## Where do you want to work next?

Someplace innovative. Startups to mid-size companies are preferable. I really want to push the boundaries and get my own boundaries pushed. I love a good challenge.

# FAQs

**Tell me what you can do.**

User research, competitive analysis, wireframes,  
prototyping. Adobe Creative Suite, Axure, Omnigraffle.  
HTML, CSS, and basic Ruby on Rails- no rspec or TDD.
